

Our beam splitters are made from high grade glass material with laser grade surface flatness & surface quality for tighter tolerance on the splitting ratio.

So, when you're on the hunt for beam splitters for your optical projects, it's super important to take a good look at some key performance criteria. These really make a difference in ...

Therefore, when choosing a beam splitter, we must consider the requirements of reflection transmittance, wavelength range, and polarization. Manufacturers such as Mok Optics offer a variety ...

Cube beam splitters offer compactness, simplified alignment, and no beam deviation, making them ideal for systems with limited space and requiring precise beam alignment.

Splitting logs for firewood or other purposes can be a daunting task without the right equipment, which is why many homeowners are turning to specialized machinery to make the ...

Beam Construction and Portability The beam guides the log and resists the force of the ram. I-beam designs are standard for most home-use splitters. Box-beam frames are stiffer and resist twisting ...

Discover top gas-powered log splitters designed to handle tough hardwoods with ease. This guide highlights five highly-capable options, emphasizing splitting force, portability, and ...

Beam splitters are devices for splitting a laser beam into two or more beams. There are different types, including polarizing and non-polarizing versions.

Our lightweight horizontal full beam and steel wedge log splitter design is built to be portable with fast and easy set up for anywhere nature takes you; Complete with 10" inch Sturdy transport wheels, allowing for smooth maneuvering for easy transportation from site to site.

With our lightweight horizontal full beam and steel wedge log splitter design for smooth maneuvering, you can conquer any terrains, such as sand, muddy and uneven roads.
