

This Manual provides four design examples illustrating the application of the strut-and-tie method for a variety of structural configurations, including a simply-supported deep beam, a cantilever bent cap, ...

In this paper, a case study cast-in-place box girder bridge with an integral two-column bent cap is used to illustrate the use of the Strut and Tie Method for the analysis and design of bent cap.

The group states the proposed crossing presents a "stark choice" for the city. The project includes a vehicular bridge over the Deschutes River.

Part of a bridge substructure. A rigid frame commonly made of reinforced concrete or steel that supports a vertical load and is placed transverse to the length of a structure. Bents are ...

Information presented herein is based on SDC (Caltrans 2019), AASHTO LRFD Bridge Design Specifications 8th Edition (AASHTO 2017) with California Amendments (Caltrans 2019), and other ...

The section contains two design examples including a reinforced concrete integral bent cap and a drop bent cap to illustrate the main design process of using the AASHTO LRFD Bridge Design ...

A pier or bent is an intermediate substructure unit located between the ends of a bridge. Its function is to support the bridge at intermediate intervals with minimal obstruction to the flow of traffic or water ...

Think of a pier as a single leg and a bent as a frame with multiple legs tied together at the top. In practice, engineers choose between them based on the span of the bridge, the loads ...

This chapter documents policy on Load and Resistance Factor Design (LRFD) of specific bridge substructure components.

MULTICOLUMN BENTS, occasionally referred to as frame bents, have two or more concrete columns that support the cap. Consideration should be given to using this type of bent on wider structures.

concrete bent consisting of columns and a bent cap beam is an intermediate support between bridge spans that transfers and resists vertical loads and lateral loads such as earthquake and wind from ...
