Chemical element, Carbon, information from authoritative sources. Look up properties, history, uses, and more.

carbon (C), nonmetallic chemical element in Group 14 (IVa) of the periodic table. Although widely distributed in nature, carbon is not particularly plentiful--it makes up only about 0.025 percent ...

On the periodic table, carbon is designated number 6, which is a unique number depicting its electron and proton configuration. In its natural form, it boasts of 12 protons and electrons, both ...

Carbon is one of the most abundant elements and forms a very large number of compounds, including carbon dioxide, carbon monoxide and carbon disulfide.

Carbon is the chemical element that allows life to exist, the core component of molecules in our cells and bodies. It eventually returns to the environment when we die, however, and the ...

The journal reports new, relevant and significant findings related to the formation, structure, properties, behaviors, and technological applications of carbons, which are a broad class of ordered or ...

Element Carbon (C), Group 14, Atomic Number 6, p-block, Mass 12.011. Sources, facts, uses, scarcity (SRI), podcasts, alchemical symbols, videos and images.

Carbon is a chemical element with symbol C and atomic number 6. It is nonmetallic and tetravalent--making four electrons available to form covalent chemical bonds.

Carbon (pronounced as KAR-ben) is a soft nonmetal denoted by the chemical symbol C. It forms several allotropes including diamond, graphite, graphene, and fullerene.

In most stable compounds of carbon (and nearly all stable organic compounds), carbon obeys the octet rule and is tetravalent, meaning that a carbon atom forms a total of four covalent bonds (which may ...
