

Some network devices support Link Aggregation Control Protocol (LACP), which helps to prevent errors in the link aggregation setup process. Unmanaged switches do not support link ...

This article provides a comprehensive explanation of link aggregation -- covering LACP, static vs dynamic link aggregation, and MLAG (Link Aggregation Plus) -- along with real ...

This lesson explains how to configure Etherchannel (Link Aggregation) using PAgP and LACP on Cisco IOS Switches.

To use the DHCP snooping option of accepting packets on untrusted inputs, the switch must be an aggregation switch that receives packets with option-82 information from an edge switch. ...

You may want to set up and configure a bonded link between your Meraki MS series switch and a Cisco switch. This is often referred to as link aggregation, link bonding or EtherChannel.

Link Aggregation is the process of combining multiple physical links (ports in the case of switches) to form one logical link, for purposes of increasing total available bandwidth, performance and reliability.

Description This article describes how to create an aggregation interface 802.3ad (LACP) using two or more (if necessary) physical interfaces. Scop...

Would you like to learn how to configure Link aggregation on Cisco Switch using the command-line? In this tutorial, we are going to show you all the steps required to configure a link ...

MC-LAG (Multi-Chassis Link Aggregation Group) allows two switches to work together as a single logical unit, providing both load balancing and redundancy. This setup ensures minimal downtime by ...

This guide provides configuration requirements, supported models, best practices, and deployment examples to help users integrate link aggregation seamlessly with switches in enterprise ...
