

Do I need to replace my router after switching fiber optic cables

The ONT connects to your provider's fiber optic network equipment, translates the signal, and hands it off to your router. So, if you're switching from cable or DSL to fiber, you can retire that ...

In most cases, yes, you can use your existing router with fiber optic internet, provided it has a WAN (Wide Area Network) Ethernet port and your ISP provides a modem/ONT with an Ethernet output.

A typical installation is optical fiber entering the premises and being connected to an ONT (Optical Network Terminal) device. The ONT converts the light pulses to ethernet.

To fully benefit from these improvements, you'll need a Full Fibre router capable of handling the high data rates associated with fibre-optic technology. Fortunately, most service ...

You can not remove/disable the AT& T router. You can put it into passthrough mode (which is similar but not quite like bridge mode). Otherwise, yes, you can continue to use your own router, if you wish so.

You can use your own router by disabling the ISP modem's Wi-Fi and ignoring its LAN ports, but the better solution is to replace the modem as well. This eliminates the ISP box entirely, ...

Wondering if you can use your own router for fiber internet? Learn about compatibility, setup tips and what to consider before replacing your equipment.

Will fiber internet boost my home WiFi performance? In short, yes. But you will still need a high-bandwidth, high-quality router that can support fiber performance to start delivering better WiFi to ...

While many existing routers can connect to a fiber network, there are several scenarios where upgrading your router is not just recommended, but essential to fully leverage the benefits of fiber optic internet.

You still need a router: The ONT converts the fiber signal but doesn't distribute Wi-Fi. You need a router connected to the ONT to get wireless coverage throughout your home -- either a ...
