

Do you still need a router if your home has fiber optic internet

While the ONT is necessary for converting the fiber optic signal, you will still need a router to distribute the internet connection to multiple devices within your home or business.

Learn about essential fiber internet equipment including ONTs, fiber routers, and setup requirements. Compare equipment options and find the best internet providers in your area.

While fiber internet doesn't require a modem, you still need a router to distribute the connection across your network. Your router works hand-in-hand with the ONT, taking the internet signal and spreading ...

You still need a router: The ONT converts the fiber signal but doesn't distribute Wi-Fi. You need a router connected to the ONT to get wireless coverage throughout your home -- either a ...

The short answer is no, you don't necessarily need a special router for fiber optic internet. However, having a router that is optimized for fiber optic internet can make a big difference ...

You don't need a special router, per se, but you do need one that can handle the speed fiber provides. If you're paying for gigabit fiber service, make sure your router supports at least ...

Wondering if you can use your own router for fiber internet? Learn about compatibility, setup tips and what to consider before replacing your equipment.

You need the modem to get the internet signal into your home, and you need the router to share that signal with all your devices and manage how they communicate.

The good news: Fiber-optic internet does not require a special router in most cases. Since the ONT handles the signal conversion, you can use virtually any quality router that supports ...

In contrast to the modem situation, any router can work with a fiber connection. That's no exaggeration, either--if it has an Ethernet port (and nearly every modern router does), you can ...
