

Dominican Continuously Adjustable Optical Attenuator

Continuously variable attenuator is used in uncontrolled environments where the input characteristics and/or output needs continually change. This allows the operator to adjust the ...

Devices for higher optical power or with other type fiber or consigned fiber are also available; Devices can only work in the core of Double Cladding (DC) Fiber, Cladding Power must be stripped before ...

Thorlabs has a wide variety of single mode (SM), polarization-maintaining (PM), or multimode (MM) fixed and variable optical attenuators (VOAs). We offer SM and PM electronic VOAs that provide control of ...

Optical attenuators are devices that reduce the optical power of a light beam by a fixed or variable amount. Key requirements include minimal effect on the beam profile, low wavelength and ...

Variable Attenuators have low minimum insertion loss, small size, lightweight, operational to 105°C without degradation, excellent for communications.

We have introduced a new type of continuously adjustable laser energy attenuator with large attenuation coefficient. The device not only has simple structure, few components, and small ...

The frequency range of our continuously variable attenuators is from 1 GHz to 18 GHz. This variable attenuator product line includes low to high power attenuators which have the power handling up to 5 ...

Single Mode Fiber Fused Couplers/Splitters.

FS fixed and variable fiber optic attenuators with leading attenuating fibers guarantee consistent and stable fiber attenuation (0~60dB) in WDM transmission.
