

Including optical fibre cables in the EU Taxonomy is essential for fostering energy efficiency, reducing emissions, and ensuring the development of resilient, future-proof telecommunications infrastructure.

This document systematically outlines the core aspects of CE certification for fiber optic cables, including certification types, applicable standards, testing methods, and compliance procedures.

The EU Commission's draft Gigabit Infrastructure Act, published on February 23, is designed to implement the necessary changes to achieve the gigabit connection goal.

Cables incorporated as a permanent part of the building construction need to be constructed and tested in accordance with CPR. This group of products concerns both fibre optic and copper datacom cables.

This guide explains how directives such as the LVD and regulations such as the Construction Products Regulation apply to cables sold in the EU.

Cables entirely incorporated in a building or construction works. The supplied cable will have a CE label on the drum flange, on the box or in the packaging. This label identifies the Declaration of Performance ...

All products subject to CPR must be covered by a manufacturer's Declaration of Performance (DoP), which must be made available to the customer. The DoP number is a component of the CE label on ...

Cable and connectivity products use safe, assured materials, compliant with ROHS3, REACH and WEEE (Italia RAEE) and several products have been self-declared as ILBC Red List Free. Product ...

The European Union has created unique and uniform classification criteria for all of Europe and a common language for defining the reaction performance of cables to fire.

TELNET provides the declaration of Conformity (DOP) for all its fiber optic cables. To download it, introduce the DOP number that appears in the datasheet in the DOP searcher.
