

Our fiberglass cable tray gives you the load capacity of steel plus the inherent characteristics afforded by our Protrusion Technology: non-conductive, non-magnetic, and corrosion-resistant. Although light in ...

ICMS Fiberglass cable tray system has been designed to work in most extreme corrosive environments for managing the cables. The system including straight Length, fittings and accessories is ...

Learn fiberglass cable tray types and specs. Compare trough, tray, ladder and epoxy composite systems to choose the right cable support for industrial projects.

4.07 Cable tray must have integral connection between side rails and rungs consisting of nonmetallic mechanical fasteners and adhesive bonding.

Lightweight yet robust and resistant to corrosion, fiberglass ladder tray often outperforms galvanized or stainless steel over the life cycle.

The table above compares the thermal contraction and expansion based on various differentials for steel, aluminum and fiberglass cable trays. The values shown represent the length of the cable trays ...

Our trays are manufactured from Fiberglass Reinforced Plastic (FRP) using high-grade resins to ensure outstanding corrosion resistance, mechanical strength, and electrical insulation.

Our Fiberglass tray weighs 1/3 that of steel trays and is pound for pound stronger. This makes the tray easy to install, reduces the possibility of lifting accidents, and lowers transportation costs.

Too much force can rapidly dull tools and also produce excessive heat which softens the bonding resin in the fiberglass resulting in a ragged edge rather than a clean-cut edge.

Tested for ABS, NEMA and IEC, B-Line series fiberglass cable tray is ideal for harsh, marine and caustic environments. Learn about its corrosion resistant properties.
