

# Gulf Region Enclosure Submersible Liquid Cooling

Across the Gulf, an explosion in artificial intelligence development and cloud infrastructure is placing a strain on another resource in even shorter supply -- water.

Learn more about Supermicro's liquid cooling solutions here. Supermicro immersion-certified servers can significantly lower Power Usage Effectiveness (PUE) by leveraging advanced ...

Submer, a global leader in sustainable datacenter infrastructure, announced the strengthening of its operations in the region with the presence of its subsidiary in the Kingdom of ...

The combination of immersion cooling and containerized data center solutions is a powerful synergy that addresses the unique challenges of the Middle East region.

Demand for eco-friendly data centers in the Gulf region is expected to boom with rapid digital transformation. The collaboration aims to accelerate deployment of immersion-cooled facilities ...

Whether you are looking for liquid-cooled ready chassis from Supermicro or high-density networking gear to support your cluster, our team understands the unique logistical and technical ...

January 2026 marks a historic convergence of three critical trajectories for the GCC data center industry. First, the Thermodynamic Cliff: The shift to Nvidia Blackwell GB200 architectures has pushed rack ...

Company specializing in immersion liquid cooling solutions for data centers. We create liquid-cooled datacenters that scale smarter, run cleaner and cost less.

Budget reallocations caused by rising Gulf electricity tariffs further highlight total-cost-of-ownership benefits, because immersion platforms cut cooling energy by up to 70% compared with ...

Discover the leading companies offering immersion cooling solutions for data centers in the Gulf countries and increase energy efficiency!
