

The structure of GYTA optical cable is that single-mode or multi-mode optical fiber is sheathed in a loose tube made of high modulus polyester material, and the tube is filled with waterproof compound.

GYTA cables feature a robust loose tube design that withstands harsh environmental conditions, ensuring long-term reliability. The specialized oil-based filling effectively protects the fibers from ...

GYTA is with high strength loose tube that is hydrolysis resistant and the optical cable filling materials ensure high reliability, its APL makes the cable crush resistant and moisture proof. The GYTA fiber ...

GYTS/GYTA cables consist of a high-quality fiber optic strand at the core, surrounded by protective loose tubes made from materials like high-density polyethylene (HDPE). These cables also feature a ...

The GYTA fiber optical cable is an outdoor communication cable featuring a loose tube stranded structure with metal strengthening member. It is protected by an aluminum-polyethylene bonded ...

The GYTA optical cable is a type of fiber optic cable that is widely used in telecommunication networks. It is known for its high tensile strength, high flexibility, and excellent ...

GYTA is an outdoor use optical fiber cable suitable for duct and aerial applications. We supply GYTA fiber optic cable from 2 fiber cores to 288 fiber cores. Both single mode type and multimode types are ...

Loose tube stranded armored fiber optic cable (GYTA) The optical fiber is 250 μ m, the loose tube is made of high modulus plastic, which is filled with waterproof compound.

GYTA is with high strength loose tube that is hydrolysis resistant and the optical cable filling materials ensure high reliability, its APL makes the cable crush resistant and moisture proof. The GYTA is ...

GYTA fiber optic cable incorporates a robust metal strengthening element, a loose tube filled with a waterproof compound, and an aluminum-polyethylene bonded sheath. The optical fibers, ...
