

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

The CMC 356 is the universal six-phase testing solution for all generations and types of protection relays, where highest versatility, amplitude and power are required.

Relay systems protect high-voltage equipment and transmission lines to ensure safe, stable systems. Although failure of a protective relay system may have severe local or regional impacts, most ...

One important complication of the technology shift is the increasing portion of the protection system design that resides in algorithms and logic in relays. Meanwhile, testing and ...

We provide comprehensive services, including commissioning, acceptance testing, relay diagnostics, and preventative maintenance, to keep your power supply reliable and efficient.

The purpose of this Standard Work Practice (SWP) is to standardise and describe the method for testing of Ergon Energy protection relays for commissioning purposes.
