Remove the excess fiber by running your thumb and forefinger carefully up the length of the fiber, without forcing it to break off. The fiber should fall away from the assembly.

Terminating fiber LC connectors requires precision and specialized equipment to achieve optimal optical performance. This comprehensive guide outlines the step-by-step process, drawing ...

To unplug the connector, firmly grab the connector's body and pull it away from the socket. The cable or equipment may be harmed if the connector is bent or twisted.

To prevent bufer tubes and fibers from being damaged or pinched between adapters and the closure, the adapters must be pulled down into place before the closure cover is installed.

Glenair's extensive experience in building fiber optic interconnect cables has enabled us to select the right tools for each step in the termination and assembly process.

Even if you could disassemble the connector body, the fiber is glued into the ferrule (white piece) and then polished.

This article covers the typical steps required to repair and/or re-terminate a damaged fiber optic cable. The actual steps may vary depending on the cable and/or connectors.

This tutorial shows you the detailed step-by-step guide on on how to terminate an epoxy and polish SC connector onto 3mm jacketed fiber. Including fiber cable stripping, connector preparation, how to ...
