Part 8: Fiber Couplers and Splitters Figure 1: A 2-by-2 fiber coupler. When using fiber optics, one often needs to use fiber couplers for various purposes. Some examples: A coupler can be used as a ...

This post provides a introduction to how does a fiber optic splitter work, and optical fiber splitter application in FTTH.

A fiber broadband provider typically determines and overall split ratio for the network, such as 1x32 or 1x64, and uses combinations of splitters to meet that ratio with each PON port.

The easiest way to do is, terminate your ISP connection to single router with at least 2 independent LAN interfaces, then you can build 2 separate networks there.
