

Our Protective Relays and IED Management solution offers an ...

Based on the identified shortcomings of this existing technical solutions for the implementation of relay protection electrical networks, a method for implementing intelligent relay protection is proposed, ...

The relay protection system in intelligent substations ensures the safety and stable operation of power grids. While redundancy configurations enhance reliability, excessive redundancy ...

The paper explores how Artificial Intelligence enhances fault detection, isolation, classification, and adaptive relay coordination in renewable-integrated power systems, addressing ...

The new generation of intelligent substations has achieved online monitoring functions for secondary equipment, making some state variables of relay protection equipment become ...

This paper explores the development of relay protection technology in smart grids, analyzing its applications in intelligent algorithms, digital devices, and automated coordination.

To achieve information sharing and interoperability among intelligent electrical equipment in intelligent substations, the author proposes research on relay protection and security technology ...

Our Protective Relays and IED Management solution offers an extensive library of complex data models and a master-type library for IEDs. Our solution's advanced integration with Network Model ...

To address these shortcomings, this paper proposes a new approach based on the XGBoost algorithm, which is expected to solve the integration and coordination problems of relay protection systems in ...

Based on the analysis of the development process of relay protection, this paper analyses the characteristics and research status of today's intelligent protection.

This study focuses on the fault diagnosis of an intelligent substation relay protection system based on Transformer architecture and migration training model.
