

JT6003 Microcomputer Relay Protection Tester

TEST-630 protection relay tester is a relay test equipment which offers all the characteristics and functions needed for protective relay testing, in a manual or automatic mode, designed for using on ...

The microcomputer relay protection tester can manually or automatically test various types of voltage, current, frequency, power, impedance, harmonics, differential, synchronous relays, etc.

This model relay test equipment can independently finish device test in professional fields of microcomputer protection, relay protection, excitation, metering, fault recording, etc.

It can test not only various traditional relays and protection devices, but also various modern microcomputer protections, especially for transformer differential protection and standby automatic ...

Our main products are Insulation Oil Tester, Cable Fault Locator, Power Quality Analyzer, High Voltage Generator, High Voltage Capacitor, Testing Transformer and so on.

Smart Multi-phase Relay Protection Tester is a new generation of intelligent relay protection test equipment for Substation ABB, Siemens, SEL, Schneider, NR microcomputer protection device etc.

Relay protection testing Sophisticated test hardware and software solutions to analyze the entire protection system performance.

HDJB series relay protection tester is a new style microcomputer relay protection test instrument. It can work alone or join with other computer.

For testing high-voltage microcomputer protection devices, it is recommended to use a microcomputer relay protection tester capable of simultaneously outputting three-phase voltage and three-phase ...

Microcomputer 6 Phase Relay Protection Test Device play a key role in operating electricity power systems reliably and safely. It is the testing device used in professional field of microcomputer ...

JT6003 Microcomputer Relay Protection Tester
