

We show that the excess phase noise of an amplified diode laser can be efficiently suppressed by double passage through a high-finesse cavity. The cavity transmits 18% of the ...

Lasers can exhibit various kinds of "noise", with manifold influences on applications. Here we discuss where such noise can come from, how it is quantified and how its influences can be minimized.

Fig. 25. Optical (S_{Vopt}) and electrical (S_{Vel}) noise spectra of BH laser diode with thyristor-like forward breakdown: (a) below thyristor turn-on current ((3-117) mA), (b) in the current range from 117 mA to ...

Principles, Measurements and Suppressions of Semiconductor Laser Noise--A Review Published in: IEEE Journal of Quantum Electronics (Volume: 57, Issue: 5, October 2021)

Chapter 7 NOISE CHARACTERISTICS OF SOLITARY LASER DIODES devices. The noise characteristics of lasers were therefore studied at an early stage of laser development, see for ...

The noise of the DFB laser was stabilized by frequency noise suppression in the unbalanced Michelson interferometer (see Section 3.1) using AOM fed by the RF signal from the RF ...

The noise of the DFB laser was stabilized by frequency noise suppression in the unbalanced Michelson interferometer (see Section 3.1) using ...

Here, we present a fully-fiberized instrument detecting and correcting the fast, sub-microsecond, phase fluctuations of lasers.

In this paper, a comprehensive overview on the principles, measurements, and suppressions of semiconductor laser noises are provided. First, we introduce the analysis models and key ...

This paper presents a thorough analysis of the noise generation mechanism and comprehensively summarizes the existing technical solutions to provide a scientific outlook on the ...

Abstract- We present a simple all-electronic stabilization scheme for suppression of external cavity mode hopping noise in diode lasers. This excess noise is generated when the laser is subjected to optical ...
