

Spot Welding Functional Module ABB Spot Welding Functional Module is a fully configured, ready-to-use, robot solution for spot welding offering a high quality and high performance. Available in robot ...

The second regime is small-scale or micro resistance welding. For this application, the two materials are again placed between two electrodes with much less pressure and much smaller electrodes.

The asymmetric shape of the welding head allows the joining of fittings with a short stick-out, and fixture blocks ensure reliable centring, alignment and clamping of all kinds of common micro-fittings.

Swagelok® Series 4 and Series 8 micro weld heads are shipped with an arc gap gauge, centering gauge, tool package, fixture tool, assorted electrode packages, and user's manual.

In this paper, the welding process with the nanosecond pulsed fiber laser is evaluated based on mechanical stability and surface finish, which allows further insight into the suitability of ...

This paper developed a novel approach to enhance the productivity of micro-resistance spot welding, where four nuggets were produced instead of two nuggets in a single operation.

A crucial step toward consistently acceptable welds is ensuring tube ends are properly prepared for welding. The Swagelok tube facing tool is designed to machine flat, smooth, square, burr-free and ...

This proposal presents a Modular In-Chamber Electron Beam Welding (MIC-EBW) approach that can be used to join large-diameter, thick-section components such as reactor vessels, steam generators, ...

MicroMIG(TM) is a pulsed-arc micro-weld process that deposits a solid filler material on a metallic base material, resulting in a fused metallurgically bonded weld without distortions or observable HAZ (heat ...

Several joining options can be considered for each of these requirements, including resistance, ultrasonic, micro-TIG and laser welding, including the newest fiber laser options.
