

By firing a low-power measurement beam through the same optics as the welding beam, LDD real-time laser weld measurement directly and accurately measures weld keyhole depth up to 40 mm and ...

Get manual to fully automated laser welding machines that weld plastics and metals with speed and precision while improving throughput.

These systems are typically used for optical assembly and for coupling light out of photonic device packaging (butterfly, TO, custom), using, for example, either ferruled optical components or ...

Fly Laser uses core technology to solve SFP/QSFP welding problems. Driven by the dual growth of 5G communications and the explosion of AI computing power, SFP and QSFP optical ...

Discover BMG's intelligent optical laser welding solution for battery connectors, combining precision, AI-based inspection, and dynamic adjustments to ensure flawless welds in high-volume production. ...

An optical frame welding machine is a specialized tool used in eyewear manufacturing and repair to securely join plastic and metal frame components. These machines utilize advanced ...

What the High Power welding module can do for you: gy based on F-Theta lenses. With the High Power welding module, you, as a machine and plant manufacturer or integrator, are ideally positioned to ...

The Alignment and YAG Welding System is a state-of-the-art alignment and welding station for high-precision YAG welding processes involving LD/PD modules, second lenses, and fiber receptacles.

Designed for ease of use, the OptX significantly reduces the welding learning curve, so even novice welders are able to quickly get projects done as if they've been striking arcs for years.

Featuring high-speed galvo scanner technology and compatible with fiber laser welding sources, our systems enable deep-penetration welding with minimal thermal distortion across diverse metals and ...
