

The Cold & Hot Aisle Containment system is retrofittable - making it ideal for improving the performance of older server rooms facing upgrades. It's also modular and scalable, which helps future-proof ...

Altimir designs, fabricates, and installs energy-efficient, custom-engineered Hot Aisle and Cold Aisle Containment Systems. Recognized for the quality of its products, the company's products are ...

AISLE CONTAINMENT Aisle containment is a crucial strategy in data center management. It involves the use of physical barriers or enclosures at the end of server aisles to separate hot and cold ...

While either hot aisle or cold aisle containment systems can be installed and are both capable of increasing efficiency and cooling today's high heat data centers, meaningful differences exist in how ...

A highly engineered data center cabinet solution that delivers fast, built-to-order configurability, best-in-class strength, and scalability regardless of the application.

Demand for Cold Aisle Containment Systems in Portugal is propelled by a confluence of structural, regulatory, and economic factors. The primary and most potent driver is the relentless ...

Yes, CAC is typically paired with raised access floor systems, allowing conditioned air to be supplied directly into the cold aisle from the plenum below. This setup ensures efficient airflow delivery.

Data centers opting for cold containment deliver cold air through a raised floor into the aisle. This air is contained in front of the cabinets, creating a homogeneous air plenum at the desired temperature.

Improve your data center's cooling and efficiency with our cold aisle containment integral roof. This solution prevents hot and cold air mixing, increasing your operational efficiency.

EDP Cold Aisle Containment (CAC) is designed to isolate the cold aisle and prevent hot server air from mixing with the cold supply air. CAC ensures that cold air is delivered directly to the server air intakes.
