

SmartRack™; Modular Data Centers are composed of IT rack, cooling and service enclosures that together form a performance optimized data center, or POD. This innovative design enables easy ...

Rack-based modular systems bring together IT racks, cooling units, service enclosures, and monitoring tools into a single, cohesive package. Designed for edge locations and distributed IT applications, ...

It's a modular-designed, highly integrated solution which comprises power supply, cooling, rack & structure, cabling and management system within a module, meeting the requirements for quick ...

It uses racks as the datacenter carrier and fully integrates all sub-systems including UPSs, cooling, power distribution, lightning protection, fire control (optional), wiring, airflow management, intelligent ...

Preferred choice for small- and medium-sized DCs, integrating power supply and distribution, cooling, rack, contained aisle, and monitoring systems to realize one DC per module.

Modular components reduce human error in the data center. All operations from assembly of the modules to the troubleshooting of the system, documentation and training are easier and more ...

It is integrated with PDU, UPS, monitoring, cooling and rack system in a comprehensive rack in order to save space. IT racks can be deployed flexibly on both sides.

These modular racks are a breeze to install, to upgrade, and to maintain. Each one of them incorporates tool-less reversing front and rear doors with U-position numbers and a wide-angle rotation of 130 ...

At the core of this infrastructure are three critical components: power distribution cabinets, column header cabinets, and micro-module racks. These systems may look like simple electrical enclosures, ...
