Silicon photonics has emerged as a transformative solution to address the energy and bandwidth challenges of modern computing and communication systems.

the challenge of system-oriented electronic-photonic co-design. This framework enables engineers to optimize high-speed silicon photonics transmitters in the context of a practical optical link. It is ...

In going from a 2D to 2.5D integration, additional structures like the TSV's (Thru-Silicon-Via) may be needed in the silicon photonics assembly. This is discussed in detail in the paper.

In this paper, the state of this emerging photonic circuit design flow and its synergies with electronic design automation (EDA) are reviewed. The design ...

Data rate of 40 Gbps per channel, showing a potential large capacity of the transceiver array, with 320 (8#215;40) Gbps per transceiver node, and 2.56 Tbps (8#215;320 Gbps) for the whole photonic circuit.

Step-by-step tutorials, straightforward examples, and illustrative source code fragments guide students through every aspect of the design process, and provide a practical framework for developing and ...

INTEGRATED CIRCUIT DESIGN FOR SILICON PHOTONICS INTERCONNECTS A Dissertation by KUNZHI YU

Broad adoption of silicon photonics technology for photonic integrated circuits requires standardized design flows that are similar to what is available for analog and mixed signal electrical circuit design.

Circuit-level abstracted models facilitate rapid prototyping of complex large-scale structures independently from the dispersed technology process (Indium Phosphide, Silicon, Silicon Nitride, ...

The purpose of this Silicon Photonics Chapter of IPSR-I is to plot the timelines for scaling manufacturing yield, photonic circuit integration and system performance for key manufacturing applications.
