In fiber-optic communication, a single-mode optical fiber, also known as fundamental- or mono-mode, is an optical fiber designed to carry only a single mode of light - the transverse mode. Modes are the ...

It consists of a pure silica core surrounded by a silica-air photonic crystal material with a hexagonal symmetry. The fiber supports a single robust low-loss guided mode over a very broad spectral range ...

We made an all-silica optical fiber by embedding a central core in a two-dimensional photonic crystal with a micrometer-spaced hexagonal array of air holes. An effective-index model confirms that such ...

A novel asymmetric large mode area single mode photonic crystal fiber with ultra-low bending loss is proposed.

A Dirac-vortex topological photonic crystal fiber is experimentally realized with broadband single polarization single-mode properties.

Here, we propose an endless single-mode large-mode-area photonic crystal fiber (LMA-PCF) integrated metalens for broadband and efficient focusing from 800 to 1550 nm.

Endlessly single-mode photonic crystal fibers are un-doped silica fibers that use a triangular pattern of air holes to form the cladding.

Edison International is one of the nation's largest electric utility holding companies, providing clean and reliable energy and energy services through its independent companies.
